Site-Wise™  
for Education

Every Student Deserves a Safe Place to Learn and Grow.  
**Do you have confidence in your school's emergency preparedness plan when every second counts?**

When you are trusted to protect the safety of others, you can't afford a delay in emergency response.

Outdated floor plans, antiquated blue prints, and inaccessible files could lead to catastrophe in a life and death situation.

Current State and Federal legislation mandates that all school districts prepare detailed emergency response plans to local and state emergency officials.

**Are you doing all you can?**

**Site-Wise:**

A safety platform with 14 years of proven educational and nuclear power plant experience. The name you can trust when quick responses save lives.

Site-Wise ensures the safety and security of students, teachers and staff with a proven, user-friendly system. It allows you to catalog still pictures or video clips to create an on-line interactive tour for both the interior and exterior of your facility.

First responders can easily assess critical situations, coordinate activities, execute strategies and deploy resources in record time while always being aware of their point of reference.

Through the use of floor plans and other drawings the system creates a visual representation of any location including access paths in and around the area.

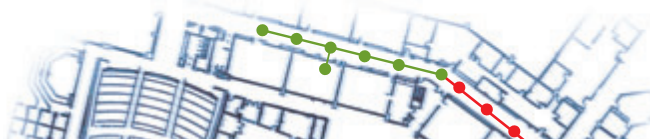

Facility components can easily be cataloged for reference. Multiple levels of

security can be defined so only personnel or emergency responders with correct permissions have access to critical information.

Site-Wise information is instantly accessible to first responders:

- via the Web (or Internet)
- stored at their command center
- in their vehicles
- or from a USB drive in the school's lock box

- Ability to catalog photos or video
- Gets key data to first responders
- Multiple levels of security
- A proven and intuitive interface
